Phone: +358 (0) 41 7297312

Oulu, Finland

About Me:

I am Haseeb, a passionate mobile app developer. I use React Native for app development to save time (with the help of using reusable components) and cost (with faster development for two OS). I am a client-oriented developer (always listen and plan according to Client plan, budget, and priority). Besides mobile app development, I love to explore AI, IoT, and the healthcare revolution and love to read about Fintech miracles. My interest for any job can be asses from the following listed points.

- ➔ I always stay in touch with client to get direct feedback on their idea.
- ➔ Plan according to the team and try to give maximum for better results.
- ➔ Always listen to the client for a clear picture of his idea.
- ➔ Discuss with the team to save time and write maintainable code.
- ➔ Stays honest with the Job.
- ➔ Never say no to learning prefer to learn from Blogs and videos to stay up-to-date with the technology advancements.

Projects List:

- **Ticket Central** – Event Organizer App
- **Bed Net** – Furniture Industry App
- **Safetee-App**
- **Nuzha** – Your Travel Assistant
- **Care Link** – Renting rooms and houses in the US
- **My Islam** – Voice to Text and Searching App
- **Scan Leaf** – An AI-Powered Disease Scanner
- **Face Recognition** – Use AWS Recognition for facial Recognition

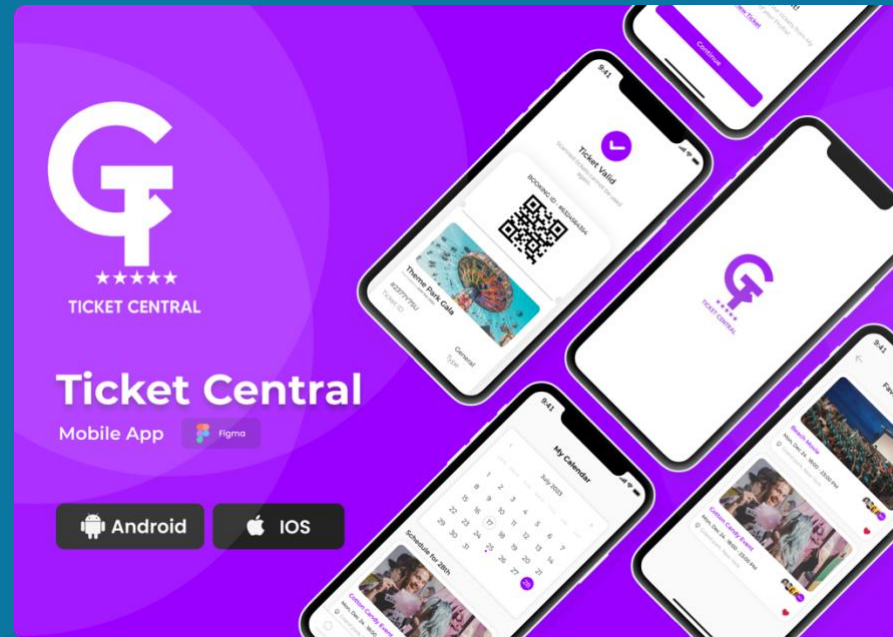

Ticket Central

This platform offers a seamless experience for

Three distinct user roles

- Guests,
- Registered users
- Organizers

catering to all aspects of event discovery, participation, and management.

- **Guests**

Guests can freely explore the platform without registration. They can:

- Browse ongoing and upcoming events.
- Utilize search filters to find events of interest.
- Discover events based on their location.
- View detailed information about any event.

- **Registered Users**

Users who create an account also act as an organizer and can unlock enhanced functionalities, enabling a more interactive and personalized experience. In addition to guest features, they can:

- Share events via social media platforms to spread the word.

- Save tickets directly to their mobile devices for easy access.
- Add events to their calendar to stay organized.
- Mark events as favorites for quick reference.
- Receive notifications about updates or changes to their favorite or saved events. These features make event management more convenient and user-friendly for registered users.

- **Organizers**

Event organizers are given comprehensive tools to manage and promote their events. Beyond the features available to registered users, organizers can:

- Post their personal events to the platform.
- Edit, update, or delete their own events as needed.
- Access data analytics to understand event performance.
- View insights based on ticket types to gauge popularity and sales trends.
- Scan tickets at the venue for efficient check-ins.

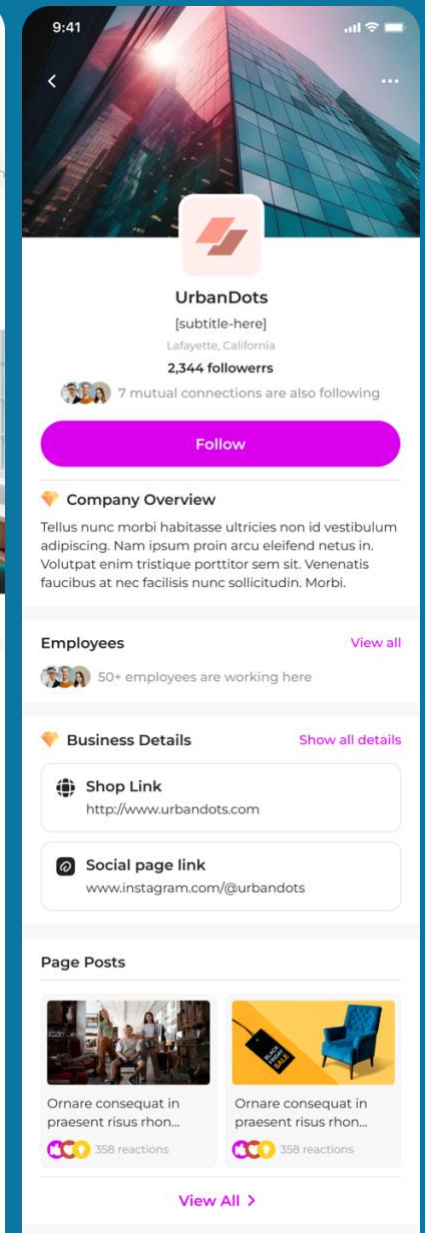

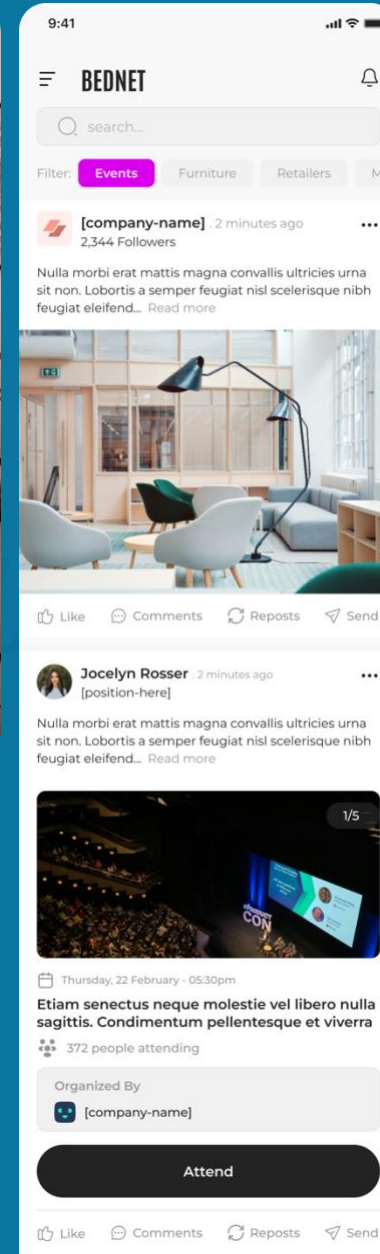

These functionalities empower organizers to manage their events effectively and provide seamless experiences for attendees.

BedNet

This app has just been created for the **furniture industry**, helping professionals easily connect, promote, and grow their businesses. From listing products to chatting with others, it's designed to bring everyone in the industry together in one place. Think of it as a LinkedIn is tailored specifically for furniture makers, sellers, and enthusiasts.

Key Features:

- **Product Listings:** Showcase furniture items or services for others to browse.

- **Ad Posting:** Promote products or services through targeted ads.
- **Diverse Post Types:** Share updates, insights, images, and more.
- **Company Creation:** Build a company profile to represent your business.
- **Networking:** Connect with industry peers to expand your network.
- **Invitations:** Invite colleagues or partners to join and connect.
- **Reviews:** Leave and view reviews to build trust and credibility.
- **Secure Payments:** Conduct transactions safely within the app.
- **Direct Chat:** Communicate instantly with other professionals.
- **Repost and Share:** Amplify content by sharing and reposting updates.
- **Comments and Interaction:** Engage with posts through comments and likes.
- **Events managing:** Events will be shown in the feed to users.

Safety App

A safety app primarily aims to enhance user safety and security through a range of features and functionalities. At its core, these apps are designed to provide quick and effective emergency assistance, often incorporating a panic button or alert system that notifies authorities or designated contacts in case of distress. Real-time location tracking is a key aspect, enabling swift response and assistance.
